Task Management System

This task is designed to evaluate your ability to build a structured web application using **Core PHP/Laravel/Codeigniter and MySQL**, focusing on **logical functionalities, CRUD operations, date-based calculations, and clean UI presentation**.

The system should include **Admin** and **User** modules, each with defined operations and dynamic interactions.

Module 1 : Admin Module

1.1. Admin Login

- Create a simple login page for the admin.
- Hardcode admin credentials (no registration required).
- After login → redirect to the Admin Dashboard.

1.2. Project Management

- Admin can **create, view, edit, and delete** projects.

1.2. Project Management

- Admin can **create, view, edit, and delete projects**.
- Each project includes:
 - Project Name
 - Description
 - Start Date
 - End Date (Deadline)
 - Assigned User (dropdown)
- On the Project List page, show:
 - Project Name
 - Assigned User

Deadline

Deadline-based Color Indicator

- Red → Deadline passed
- Orange → Today is the deadline
- Green → Future deadline

1.3. Task Management

- Admin can **create multiple tasks** under each project.
- Each task includes:
 - Task Title
 - Description
 - Assigned User
 - Priority (Low / Medium / High)
 - Deadline
- Show all tasks grouped by project.
- Include **progress status** (Not Started / In Progress / Completed).

Module 3 : Deadline Tracking Module

Objective:

To handle deadline-based color indication and time-sensitive logic without using external APIs.

Instructions:

- Use PHP's local time functions (`date()`, `strtotime()`, etc.).
- Set the timezone with `date_default_timezone_set()`.
- Compare the current local date/time with task deadlines.
- Display corresponding color indicators dynamically.

Technical Requirements

- Core PHP or Laravel or Codeigniter
- MySQL for database
- Bootstrap or any front-end library for styling
- Code should be modular, readable, and maintainable
